This book is printed in two sections. The first section contains a current page listing, an alphabetized table of contents, and a numerical index with location of all part numbers included in this catalog.

The second section includes a part number listing, referenced to item numbers on the illustrated pages. All pages will carry the issue date and the machine model number (#) to assist in identifying the machine to which the parts catalog applies.

When changes to the machine make it necessary, revised pages for this catalog will be issued. The revised pages will be issued with the same page numbers as those they replace and the "revision" number and date will be advanced.

Whenever a page of this catalog is re-issued, the "current page listing" will also be re-issued. This listing will show the issue date of each page as a check sheet covering the entire catalog. It is imperative that revised parts catalog pages be inserted into their respective locations as soon as received. failure to do so will lead to confusion when ordering parts.

SYMBOLS INDICATING SERIAL NUMBER EFFECTIVITY

■ A black square in front of a part number indicates that the existing stock should be used prior to ordering the superseded part number listed below it.

Examples in Parts Listing (with or without Serial Number)

6 278 090 (S.N. 840H-00001 thru -00200) 7 326 972 (S.N. 840H-00201 and later)	This usage indicates a design change in which the parts are not interchangeable.
■ 730 020 (S.N. 840H-00001 thru -00932) 840 101 (S.N. 840H-00933 and later)	This usage indicates that the second part interchanges with the first part but that the second part must be stocked for its respective effectivity.
■ 079 323 (S.N. 840H-00001 thru -00600) 079 498 (S.N. 840H-00601 thru -00680) 808 832 (S.N. 840H-00681 and later)	This usage indicates that the second part interchanges with the first part but that the second part and the third part must be stocked for their respective effectivities.

NOTE: Supersedence and interchangeability cannot always be indicated in the illustration by (■) black square or ([ ) bracket -- be sure to check Serial Number effectivity and substitution of single or related parts in the Parts Listing.

REPLACEMENT HARDWARE

Hex bolts, hex cap screws, hex washer head machine screws, round head square neck bolts and hex nuts are Grade 5 plated unless otherwise specified. Hex flange screws and hex flange nuts are Grade 8 plated unless otherwise specified. This does not include hex flange serrated screws. Beginning February 15, 1989, flat washers were changed from wide soft to narrow hardened. Prior to 2/15/89, the abbreviation "P" represented a wide soft flat washer. After 2/15/89, the abbreviation "P" represents a hardened narrow flat washer. The use of any improper grade of hardware can result in the failure of the hardware or related structures, and can cause personal injury, damage to the equipment, or loss of property.

YOU ARE ASSURED THE LATEST

You may note an occasional difference between the illustration and an actual part received on your machine or as a replacement. This means you are getting the benefit of a new design improvement made after the release of this catalog.

SERIAL NUMBER IDENTIFICATION

When ordering parts, always specify the serial number. A serial number plate is located on the left side of the mainframe. This catalog covers machines with serial numbers beginning with:
